

# Minimum feed-in tariff 2023-24

## Submission received through Engage Victoria

Date submitted: 20/12/2022

Submission written by: Steve Miller

From December 2022, we began accepting submissions on our Minimum feed-in tariff review 2023-24 via Engage Victoria ([www.engage.vic.gov.au](http://www.engage.vic.gov.au)). On this website, people were given the opportunity to send us a response to a set of questions we provided.

**What parts of our proposed methodology for setting the minimum single and time-varying feed-in tariff rates do you consider are appropriate?**

**What parts of our proposed methodology should we change?**

**For our overall methodology, or parts of it, what alternative methodologies should we consider?**

Perhaps watch the news and also take a good look at changes in the retail prices. This year I had my electricity costs increase by 35% while the federal government experts are predicting further increases.

These 2 facts are the exact opposite of what you predicated last year when reducing feed-in tariffs and we'll be even worse off next year thanks to you.

And solar feed-in in the dark? How do you propose we do that when the whole point of solar is to operate when the sun is shining ?
