

Minimum feed-in tariff 2023-24

Submission received through Engage Victoria

Date submitted: 20/12/2022

Submission written by: Michael van Bragt

From December 2022, we began accepting submissions on our Minimum feed-in tariff review 2023-24 via Engage Victoria (www.engage.vic.gov.au). On this website, people were given the opportunity to send us a response to a set of questions we provided.

What parts of our proposed methodology for setting the minimum single and time-varying feed-in tariff rates do you consider are appropriate?

a single feed in tariff is more preferred due to the times stated of the time varying option is pointless during hours of no solar activity

What parts of our proposed methodology should we change?

the calculated amount of the feed in tariff. people are paying a high price for their panels and the value of power they are buying into as well. the cost of living and supply goes up for all power companies but for homeowners supplying the power companies they seem to be reimbursed for less even though upkeep and maintenance is paid for by the owner not the power company

For our overall methodology, or parts of it, what alternative methodologies should we consider?

take into consideration current power costs and maintenance and value of the solar panels
